

Moisture Minder®

The attached chart is of the daily voltage measurements that have been done for the Moisture Minder® power consumption:

- The circuit operated for 468 days in total.
- Battery alarm came on at day 396 and continued sounding to the end of the battery life. Loud enough for more than 60 days.
- All functions of detection and battery alarm were working 100% to the last day.
- Audio alarm stayed loud up to approximately 12 days before battery failure.

The batteries used to do the test were not alkaline batteries. It is expected that alkaline batteries will last longer.
